

Tiger AI

The world's most profitable tiger

Tiger Ai Ecological Introduction

The world's first institution level quantitative capability AI The intelligent fund body originates from the system evolution of Tiger Fund and opens up AI New Era of Asset Management

**Tiger AI**

The world's most profitable tiger

Introduction to TigerAI:

Tiger AI: The world's first AI smart fund with institutional-level quantitative capabilities. Tiger AI Management LLC is an artificial intelligence financial technology company registered in Delaware (United States) and headquartered on Wall Street, New York. It focuses on building an institutional-level intelligent asset management system to drive global quantitative investment and Web3 digital asset allocation with AI. Tiger AI was co-founded by a group of core members from top institutions such as Tiger Global Management, Goldman Sachs, Two Sigma and Bridgewater. It combines practical experience on Wall Street with world-leading AI modeling capabilities, committed to building a global, autonomous, and replicable intelligent asset infrastructure.

Core technology: NEURALIGHT smart engine

The NEURALIGHT intelligent decision-making system independently developed by Tiger AI integrates neural network evolutionary calculation and reinforcement learning mechanism, has 300 billion + parameter processing capabilities, real-time access to multi-chain ecological and global market data, builds a high-dimensional market map, and realizes asset allocation, Risk control, and full-process intelligent decision-making closed-loop for strategy execution.

Core products: AI Smart Fund's four major cycles of allocation

Tiger AI Fund covers 1,200 high-quality encrypted assets, focuses on mainstream ecosystems such as Ethereum, BNB Chain, Solana, and TON, and provides four major cyclical AI fund products for different risk-return preferences:

7D-AI Weekly Fund (7-Day Smart Cycle)

3M-AI Quarterly Fund (3-Month Smart Cycle)

6M-AI Semi-Annual Fund (6-Month Smart Cycle)

9-Month Strategic Cycle

Tiger AI

the world's most profitable tiger

All fund strategies are automatically driven by the NEURALIGHT system, self-evolving, compound interest optimization, and support users to view real-time returns and asset distribution every day.

Global compliance qualifications: three authoritative financial licenses

Tiger AI has completed the registration of corporate entities in the United States and obtained three major financial regulatory licenses in the United States to fully guarantee the legal and compliant operation of the platform:

1. MSB financial services license issued by FinCEN in the United States Authorized to carry out digital asset and cryptocurrency financial business, in line with anti-money laundering and customer identity verification standards.
2. American NFA Futures Association compliance filing Has completed the compliance filing of the U.S. NFA Futures Association and has the status of CTA/CPO exemption administrator.
3. RIA investment advisor license approved by the US SEC (Securities and Exchange Commission) Authorized to provide professional, regulated asset management services to clients worldwide.

Vision and Mission: Promote AI-based autonomy of global capital

Tiger AI is not only a fund, but also a smart asset system platform that integrates AI, data, computing and finance. We believe that:

> "Finance should not be a game of totalitarian control, but an order driven by calculation." Through Tiger AI, the global ordinary body is the financial center that promotes the de-authoritativeness of capital. "Investors can stand on institutional-level AI capabilities for the first time and obtain professional, transparent, low-threshold intelligent asset allocation solutions.

Deep binding between Tiger AI and TT (Tianti) trading platform

1. TT (Tianti) Group's first ecological project

Tiger AI is the first ecological project incubated by TT (Tianti) Group, representing that TT ecology has officially entered the field of AI quantitative investment.

On July 21, 2025, TT (Tianti) Group invested 300 million US dollars in Tiger Company, and Tiger AI Management LLC officially became a holding subsidiary of TT Group.

2. Build a huge ecological circle

In the future, TT will continue to incubate hundreds of similar projects, build a diverse and powerful blockchain ecosystem around CTC tokens, and truly realize "project symbiosis and value win-win".

3. Tiger AI's three major driving forces for TT Tianti Trading Platform

Effective drainage: Tiger AI will attract a large number of new users to register and use TT Exchange, injecting continuous vitality into the platform;

Enrich product lines: Provide users with more diversified and smarter investment options, and improve user retention rate;

Enhance CTC value: Through the expansion of application scenarios and a large user base, further consolidate the market recognition and appreciation potential of CTC tokens.

Five core advantages of Tiger AI

Low investment threshold and simple operation

Users can quickly get started without complicated operations and easily participate in promotion and investment.

AI smart financial management system, double guarantee of security and efficiency

Relying on the self-developed AI system, Tiger AI has powerful data analysis and dynamic position adjustment capabilities to achieve capital security, sustained profitability and system self-hematopoiesis.

With the blessing of "Leader Wisdom" course, the foundation of trust is solid

Teacher Yu's "Leader Wisdom" course has the recognition and trust of tens of millions of campers. It empowers Tiger AI with a strong belief foundation and community influence, and is an important guarantee for the credibility of the project brand.

Multi-cycle investment model, flexible and diverse profits

The platform has designed four cycles of financial products to meet the needs of users with different risk preferences and income expectations, and create diversified income channels.

Tens of millions of traffic resources are tilted, and the first-mover advantage is obvious

The tens of millions of traffic accumulated by the original TT applet will all be imported into the Tiger AI platform free of charge. In addition, the TT exchange has accumulated 700,000 + CTC currency-holding users, and the traffic dividend value is huge, helping Tiger AI quickly achieve explosive growth in users.

Product structure

1. Periodic fund (regular investment)

Effective customer investment amount

$\geq 100 \text{ USDT} \leq 50,000 \text{ USDT}$

Investment currencies: USDT, ETH, BTC

Investment ratio:

90% USDT+10% CTC (equivalent)

Cycle options and benefits:

Pledge cycle	Output USDY	Distribution of income
7-day quantitative investment package	Daily Earnings 1%	5% platform management fee; 45% personal investment dividend; 50% team management dividend;
90-day quantitative asset package	Daily Earning 1.3%	5% platform management fee; 45% personal investment dividend; 50% team management dividend;
180-day quantitative asset package	Daily Earning 1.6%	5% platform management fee; 45% personal investment dividend; 50% team management dividend;
270-day quantitative asset package	Daily Earning 2%	5% platform management fee; 45% personal investment dividend; 50% team management dividend;

For example, investment income worth 10,000 USDT:

9000USDT + CTC (worth 1000USDT) yields USDY, invested for **270 days** customer income

Quantitative income: investment value 10,000 USDT * daily output 2% = 200 * personal dividend 45%
= 90 * 270 days = 24,300 CTC appreciation income = value 1000USDY * CTC is expected to appreciate
50 times = 50,000

Customers can get in 270 days: 24,300 (quantitative income) 9,000 (principal) 50,000 CTC appreciation
income = 83,300 (return rate 833%)

Important note: USDY can directly flash to USDT to make a profit, or directly deposit it into the token fund
to produce TAC; USDT cannot flash against USDY; The withdrawal fee of part of the income is 5%;

General Administration Fund (Current Investment)

Cycle: In and out

Effective customer investment amount ≥ 100 USDT $\leq 50,000$ USDT

Funds allocation: 80% USDT + 20% USDT

Daily revenue: 1%, revenue output is TAC

TAC Daily Growth: 0.4%

Income distribution: 45% user dividends, 5% platform management fees, 50% market value management

For example, the investment amount is 10,000;

$8000\text{USDT} + 2000\text{USDT} \times \text{Daily output } 1\% = (\text{value } 100\text{USDT}) \text{ TAC} \times \text{Personal dividend } 45\% = 45 (\text{equivalent TAC}) \times 365 \text{ days a year} = 16,400 (\text{equivalent TAC})$ It is estimated that TAC will increase by 2-5 times a year = 32,800
Final benefit = 10,000 principal + 32,800 = 42,800, annualized return rate 428%

TP team management reward system

The hierarchy is divided into TP1-TP9, with a total of nine levels

20%-100% management rewards based on team earnings

Income ratio description:

Promoted to TP4, your investment amount is 1000USDT, and the maximum income is 50% of the team's investment income, and the maximum income you get is 4 times the investment ratio, that is, 4000USDT;

Equal level award

When a subordinate team member is promoted to the same level as you TP At the level, the referrer can obtain the team members TP 20% profit sharing.

rank	Promotion criteria	Community benefits (Step Difference)	Reward cap (Self-Injection Multiple)
TP1	Team investment amount ≥ 3000 USDT or above	20%	X1
TP2	Two TP1 users Team investment amount $\geq 10,000$ USDT or more	30%	X2
TP3	Two TP2 users Team investment amount $\geq 30,000$ USDT or more	40%	X3
TP4	Two TP3 users Team investment amount $\geq 100,000$ USDT or more	50%	X4
TP5	Two TP4 users Team investment amount $\geq 300,000$ USDT or more	60%	X5
TP6	Two TP5 users Team investment amount ≥ 1 million USDT or more	70%	X6
TP7	Two TP6 users Team investment amount ≥ 3 million USDT or more	80%	X7
TP8	Two TP7 users Team investment amount ≥ 10 million USDT or more	90%	X8
TP9	Two TP8 users Team investment amount ≥ 30 million USDT or more	100%	X9

Explanation of equity dividend mechanism formula

User dividends = (user equity value/total equity value of the entire network) × total daily dividends of the entire network
Equity value = "Total amount of other teams excluding the maximum investment line × equity coefficient"

Daily assessment system

User level is automatically updated daily at 00:00 UTC. Daily dynamic assessment to ensure that the system is fair and efficient. Only TP users who have invested ≥ 100 USDT can receive rewards.

grade	demand	Equity coefficient
TP9 plus 1 star	TP9 itself, directly push TP9 subordinates	1% weighted
TP9 plus 2 stars	TP9 itself, directly push 2 TP9	2% weighted
TP9 plus 3 stars	TP9 itself, directly push 3 TP9	3% weighted

Best Personal Investment Income Layout

Annual investment return = annual quantitative income + 90% USDT principal + 10% CTC appreciation

Investment amount	Fund income	TP1 income	Daily Earnings	Monthly income	Annual income
US \$3,500 270-day fund	$3500 * 2\% * 45\%$ = 31.5 U/day	$315,000 * 20\%$ = 6.3 U/day	$31.5 + 6.3$ = 37.8 U	$37.8 * 30 \text{ days}$ = 1134U	$1134 * 12 \text{ months}$ = 13,600
CTC appreciation income			Return on investment		
$350 * 50 \text{ times a year}$ = appreciation of 17,500			Return on investment: 13,600 annual income + 3150U principal + 17,500 CTC appreciation = final 34,200		

TP1 main account investment 500USDT

First layer: $1500U * 2$

Investment amount	Fund income	TP2 Income	Daily Earnings	Monthly income	Annual income
US \$105 million 270-day fund	$10500 * 2\% * 45\%$ = 94.5 U/day	$945,000 * 30\%$ = 28.35 U/day	$94.5 + 28.35$ = 122.85 U	$122.85 * 30 \text{ days}$ = 3685.5 U	$3,685.5 * 12 \text{ months}$ = 44,200
CTC appreciation income			Return on investment		
$1050 * 50 \text{ times a year} = \text{appreciation of } 52,500$			Return on investment: 44,200 annual income + 9,450U principal + 52,500 CTC appreciation = final receipt of 106,100
